

Recomend denial of RM-10521.

Mr. Trahos has proposed a rulemaking to fix a problem that has already been solved with FRS. If the capabilities afforded by the use of Amateur Radio frequencies are required, then obtaining an amateur license is the normal course. Licensing opportunity is available to the foreign national both in their home country and the USA.

Additionally, Mr. Trahos' inference that use of 446 MHz for his proposal would be of little consequence to Amateur Radio is erroneous. 446MHz is one of the most active frequencies on 70cm.
